

New Celgene Production Site Couvet (NE)

The new pharmaceutical site has been designed like a campus with production and administration areas, a storage centre and a building for drug packaging. An overhead glass walkway provides an efficient link-up between the different areas. The architectural concept also opens up various possibilities for extension in future. The approach aims for volumetric integration adapted to the site's characteristic features, involving a rational architectural language in keeping with the production programme, multi-purpose flexibility and efficient functional organization.

Ground floor plan

New Celgene production site Couvet (NE)

Location

Couvet (NE)

Client

Celgene International Sàrl

Programme

Industrial campus with production, administration, packaging, warehouse, welcome area and restaurant

SIA Volume 416 total

Approx. 106'000 m³

Realization

2016 - 2018
