

Intercommunal masterplan Malley

The synthesis of the test study highlights the potential of the sector and presents a series of development strategies. The urban sector is structured into 6 coherent entities, whose identity is clearly defined. Malley master plan represents a straight continuation of these reflections. The characteristic structure of the project offers urban landmarks, manages the public transport platform and creates a network of high-quality public spaces.

Built structure | iconic shaped skyscrapers (red) are linked to the places. Some vestiges from the past remain (brown).

Green structures | Parks, living area's green islands, north-south and east-west green axes. The goal is to strengthen the continuity of green axes to the area level.

Intercommunal masterplan Malley
