

modular-x Männedorf In the medium-to-long term, an architectural design competition will be organized for the extension of the Hasenacker school complex in Männedorf. In order to meet the urgent needs for space, the commune of Männedorf had to find an interim solution. Bauart thus planned and realized the modular-x pavilion within 4 months. It includes 2 stories which host 2 classrooms each, as well as an eating area. Modular-x is an application of the züri-modular product, which was developed to meet the needs for school buildings in the City of Zurich.

FACADE

PLAN GROUND FLOOR

modular-x Männedorf
